PROJECT I: HORIZONS OFFICES

The purpose of this project is to introduce you to building simple web pages using the bootstrap framework.

We are going to recreate the Horizons Offices page in the snapshot below.

ABOUT US

PLANS

VIRTUAL OFFICES

Our virtual offices allow your business to get our location address, phone services and also you become a member of our community with benefits such as access to our meeting rooms.

CUSTOMIZED OFFICES

Our customized offices offer a great location for your business and you can customize your office to suit your preferences. Also, you become a member of our community with benefits such as access to our meeting rooms.

SERVICED OFFICES

Our serviced offices offer a great location for your business and we provide services such as internet, utilities and offers from our partners. Also you become a member of our community with benefits such as access to our meeting rooms.

MEETING ROOMS

Our meeting rooms offer a great location for your meeting with your clients or business partners. We provide presentation equipment and coffee. Also you become a member of our community with benefits such as access to our meeting rooms.

VISIT US IN KENYA

Nairobi, Kenya

Belgravia Centre, 14 Riverside drive,
4th floor, Off Riverside Drive

Hanover Centre, 14 Riverside Drive,
6th floor, Off Riverside Drive

VISIT US IN GHANA

Accra, Ghana

One Airport Square, Airport City
8th Floor

VISIT US IN NIGERIA

Lagos, Nigeria

Sterling Bank Building

Instructions:

1. Create the wireframe for the page.

This is just a simple sketch that represents the skeletal framework of the webpage we are going to create. It is very important to always sketch the layout of the page you want to build on a piece of paper so as to guide you along the way to achieve the desired look.

Below is an example of a wireframe.

Send a snapshot of your sketch to your teaching fellow for feedback before proceeding to the next instruction.

- 2. Create the navbar.** You are not required to do the flags and remember to always send a snapshot after completing a particular instruction to your teaching fellow before proceeding to the next instruction.
- 3. Create the slider.** This is also known as the Carousel and you can find sample code and instructions on how to implement it on the bootstrap website (www.getbootstrap.com/javascript/#carousel).
- 4. Create the content.** This shouldn't be hard to do if you still remember Thumbnails from the bootstrap course you studied earlier.
- 5. Build the footer.**

Send your final work to your teaching fellow for assessment. Goodluck!
